

Trend Micro™

NeatSuite™ Advanced

Multilayered, Multi-threat Protection for the Enterprise

Today your enterprise is threatened by a new generation of blended threats that attack at multiple entry points to find the weak point in your defenses. The latest of these are “Web threats,” which target specific businesses or communities to steal private data for profit on the black market.

Trend Micro offers you NeatSuite™ Advanced, a fully integrated, centrally managed enterprise security suite designed to protect your Internet gateway, mail servers, network servers, storage systems, and desktops from Web threats and other malware. NeatSuite Advanced scales to meet the needs of enterprises by providing a gateway-to-endpoint security solution that offers extensive configuration options and maximum administrative efficiency.

Unlike competing enterprise suites, NeatSuite Advanced offers a unique combination of centralized management from a single console, support for the broadest range of operating systems, superior integration with Cisco network security technology, and Web threat protection that is unmatched in the industry.

KEY FEATURES

Fully Integrated, Gateway-to-Endpoint Enterprise Security Suite

- Delivers multilayered, multi-threat protection at the Internet gateway, Microsoft® Exchange® and Lotus™ Domino™ mail server, network server, storage system, and client
- Includes automated malware and spyware cleanup of clients, including rootkits
- Improves productivity by stopping spam and fraudulent phishing-related emails
- Reduces risk of liability by supporting regulatory compliance and blocking inappropriate content with email filtering at the gateway and the mail server

Web-based Centralized Management Console

- Manages security infrastructure with centralized administration for security updates, patch deployment, coordinated response, and remote management capabilities
- Offers flexible policy definition and enforcement with extensive configuration options
- Provides robust, enterprise-wide graphical reporting

New! Industry Leading, In-the-Cloud Web Reputation

- Protects against Web-borne malware, data theft, lost productivity, and reputation damage
- Blocks access to malicious Web sites based on reputation ratings
- Leverages Trend Micro's unique in-the-cloud Web reputation database with millions of dynamically rated sites
- Provides real-time protection based on malware, spam, and spyware activity

Designed for the Enterprise Network Environment

- Provides broad operating system support for heterogeneous enterprise environments
- Tightly integrated with the leading solutions for network infrastructure and enterprise applications, including those from Microsoft, Cisco, and IBM Lotus
- Supports large multi-site networks with enterprise-class scalability, configurability, and multi-tier management structure

SOFTWARE & SERVICES

Protection Points

- Internet “in-the-cloud”
- Gateway
- Mail servers
- Network servers
- Storage systems
- Clients

Threat Protection

- Inappropriate content
- Spam and phishing attacks
- Spyware, rootkits, and bots
- Viruses and Trojans
- Web threats
- Worms and network attacks

KEY BENEFITS

- Reduces risk with comprehensive multilayered, multi-threat protection from known and unknown threats
- Provides unparalleled protection from Web-borne threats to prevent resource and data theft
- Maximizes administrative efficiency with centralized management and automatic updates
- Offers enterprise-class scalability and configurability
- Lowers overall threat exposure with the highly integrated security framework of Trend Micro™ Enterprise Protection Strategy

WHY TREND MICRO?

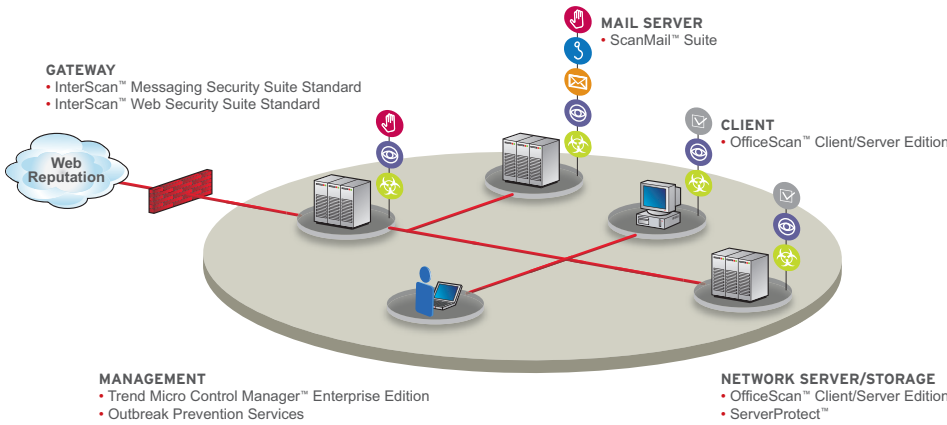

- First in gateway antivirus protection for seven years in a row¹
- Number one in anti-spam protection²
- Top security vendor rated by CIOs³
