

Trend Micro™

PortalProtect™ for Microsoft® SharePoint®

A Dedicated Layer of Protection for Confident Collaboration

Many companies are now using Microsoft® SharePoint® to connect with employees, partners, and customers for real-time collaboration. Businesses are also using more SharePoint capabilities than ever—moving beyond simple content repositories to build team sites, create intranet and extranet portals, utilize wikis and blogs, and create social communities.

These dynamic collaboration environments help improve productivity, but they also increase your security risks, especially when opened to external parties.

Trend Micro™ PortalProtect™ secures your collaborations with a dedicated layer of protection that guards against malware, malicious links, and other threats that SharePoint administrators are often unaware of. Its web reputation technology blocks malicious links from entering your web portals, while its powerful content filtering scans both the files and web components of SharePoint.

PortalProtect goes above and beyond standard antivirus protection by delivering scalable strong web threat protection and data loss prevention.

KEY FEATURES

Antivirus & Antispyware

- Blocks infected files from entering SharePoint
- Protects data from corruption and theft
- Stops high-risk files based on true file type
- Prevents threats from spreading among users

Advanced Content Filtering

- Prevents posting of inappropriate content to document libraries, blogs, wikis, and forums
- Incorporates data loss prevention technology with preset policies to prevent data loss and compliance violations
- Provides data loss prevention templates that can be customized and can log and/or block violations
- Enables granular policies based on Microsoft Active Directory® or SharePoint users/groups as well as SharePoint sites

Web Reputation Technology

- Blocks web links to malicious or compromised websites
- Provides immediate protection using up-to-the-minute threat intelligence

Low Administration

- Requires half the administration time required by competitive solutions¹
- Strong group configuration and management with centralized logging and reporting
- Central quarantine management across servers
- Role-based access control with single sign-on
- Integrates with strategic Microsoft tools, including Digital Dashboard and Web Parts

Enterprise Scalability

- Supports hundreds of thousands of users
- Installs efficiently through remote deployment
- Optimized with agentless database inspection
- 5X less latency added than competitive solutions
 - Supports Smart Protection Server technology for 10X less memory usage on the SharePoint web server
- **NEW!** Supports remote BLOB storage for both real-time and scheduled scans
- Native 64-bit support

SOFTWARE

Protection Points

- SharePoint server

Threat Protection

- Antivirus
- Antispyware
- Web Threat Protection
- Data Loss Prevention
- Content Filtering

KEY BENEFITS

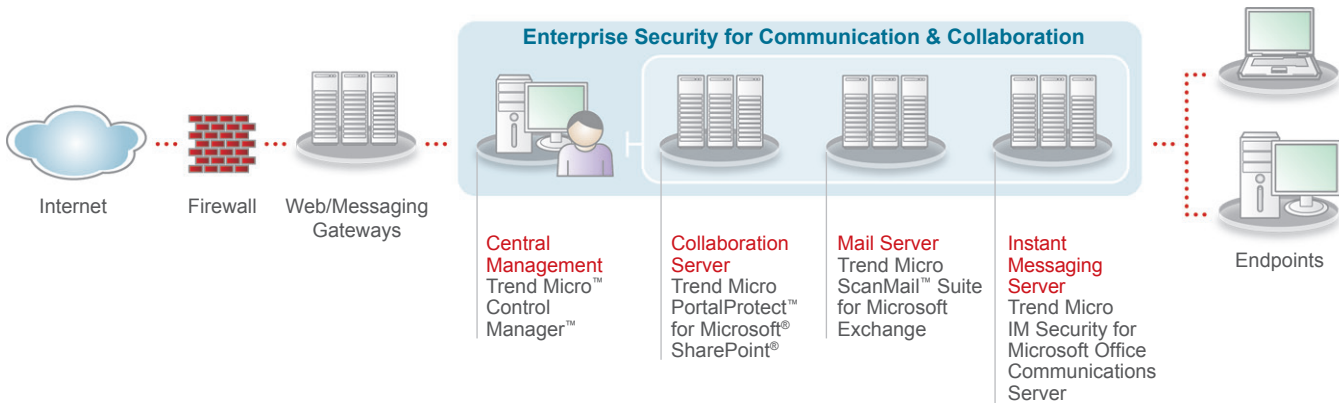

- Provides dedicated protection for SharePoint users and data
- Stops the wide range of malicious files and URLs
- Filters inappropriate content data in both files and web parts
- Takes half the time to manage¹
- Scales to any deployment size
